In 106 cases, a new peroral penicillin V, Ospen, has been applied 114 times. The product is absolutely comparable to a parenteral penicillin G supposedly applied every 3-4 hours. It is also superior to Depot-penicillin from the economical point of view. The biggest advantage being the injection avoidance. In the cases of medium difficult diseases the next dosages are recommended: up to 15 kg. of body weight: 6 times

CLINICAL EXPERIENCES WITH THE NEW VASOPRESSOR HYPERTENSIN (Klinische Erfahrungen mit dem Neuen Vasopressor Hypertensin). [1961] [9]p. 29 refs.
Order from SLA mi$1.80, ph$1.80 61-10823

Trans. of Wiener Med[izinische] W[ochen]schr[ift] (Austria) 1960, v. 110 [no. 7] p. 148-150.

Hypertensin is a highly active vasopressor, which in certain indications and with consistent use also of prolonged infusions can sometimes provide help in otherwise desperate cases. Sometimes very demanding use of anesthesists for accurate continued surveillance of the patients must be an absolute requirement. Since hypertensin seems to be free from any undesirable side effects (in particular, no extensive necroses as a severe complication of the infusion were observed in the 7 cases here reported), it is definitely preferred to norepinephrine in the prolonged infusion technique.
